

SALMAN SADIQ

UNITY DEVELOPER | VR, AR & MULTIPLAYER SYSTEMS

+92 303 4736071 ◇ Lahore, Punjab, Pakistan

sadqq.salman@gmail.com ◇ [Portfolio](#) ◇ [LinkedIn](#) ◇ [GitHub](#)

PROFILE

Unity Developer and Associate Software Engineer with 2 years building VR, AR, multiplayer, and AI-driven applications. Core stack: Unity/C#, Meta Quest 2/3, XR Toolkit, Unity Gaming Services, WebRTC, and Azure TTS. Recently shipped AI teachers with real-time lip-sync and conversational chat, and a multiplayer VR meeting room for up to 10 concurrent Quest users with live browser screen sharing.

EXPERIENCE

Associate Software Engineer

Ilmiversity

October 2025 - Present

Lahore, Pakistan

- Built conversational AI avatars with real-time lip-sync - three subject teachers for physics, chemistry and programming, plus a guide robot on each of six expo stalls - mapping Azure TTS visemes to facial blendshapes through a JSON-driven framework so each one answers free-form questions with spoken replies.
- Implemented in-world scene transitions that carry a visitor from a stall's miniature model into that model's full-scale environment to explore it.
- Sustained the target 72/90 FPS across every Meta Quest 3 scene using LODs, static/dynamic batching, occlusion culling, baked lightmaps, and shader-driven effects.
- Engineered a multiplayer VR meeting room for up to 10 concurrent Quest users on Unity Gaming Services (Lobby and Relay) and Netcode for GameObjects.
- Integrated Unity Render Streaming with WebRTC to stream a presenter's browser screen into VR, building the Node signaling server and STUN/TURN configuration for cross-network connections.
- Integrated Model Context Protocol (MCP) tooling into the Unity Editor for automated scene inspection and asset edits, and implemented Data Version Control (DVC) to version AI datasets and model artifacts.
- Delivered across two-week Jira sprints, reviewing every merge and tracking cross-team dependencies in Asana.

Games & VR Developer

UET Game Studio

April 2024 – September 2025

Lahore, Pakistan

- Built controller interactions and realistic steering wheel physics using Realistic Car Controller (RCC) and XR Toolkit.
- Developed wave spawning, state machines, and ragdoll systems for a multiplayer FPS on Opsive Character Controller, networked over Photon PUN.
- Shipped Unity titles across VR, mobile, PC, and WebGL, deploying browser builds to Vercel for instant cross-platform access.
- Streamlined team collaboration by rolling out Unity Version Control / Plastic SCM branching, cutting merge conflicts on shared scenes.

SKILLS

Programming	C#, OOP, C++, DSA, SQL
Game Development	Unity, Gameplay Programming, AI Systems, UI Systems, Animation, Timeline, Cinematics, Particle Effects
Graphics & Optimization	LODs, Batching, Occlusion Culling, Baked Lighting & Lightmaps, Mobile Shaders, Profiling
AR/VR	XR Toolkit, MRTK, Meta Quest 2/3, Vuforia, AR Foundation, VR Interaction Systems
Multiplayer & Web	Unity Gaming Services (Lobby, Relay), Netcode for GameObjects, Photon PUN, Unity Render Streaming, WebRTC, WebGL, Vercel
AI & Speech	Azure TTS, Conversational AI Chat, Viseme & Blendshape Pipelines
Tools	Visual Studio, GitHub, Jira, Asana, Model Context Protocol (MCP), Data Version Control (DVC), Plastic SCM, Unity Version Control
Assets & Plugins	RCC, UFPS, Opsive Character Controller, EasyRoads3D
Ways of Working	Agile/Scrum, Sprint Planning, Code Reviews, Cross-Functional Collaboration

EDUCATION

Master of Computer Science

University of Okara

2021 – 2023

BSc in Computer Science and Double Math

University of the Punjab

2018 – 2020

PROJECTS

Da1lImverse - VR Campus Platform | *Ilmiversity* | *Unity/C#* | *Meta Quest 3* | *Azure TTS* | *UGS Lobby & Relay* | *Netcode* | *WebRTC*

Enterprise VR campus delivered as one product across several environments: **V Campus**, an explorable campus tuned for standalone VR; **AI Classroom**, where three AI subject teachers lip-sync to their own speech and answer student questions through conversational chat; and a **Multiplayer Meeting Room** for up to 10 users joining by 6-digit code, with a presenter's browser screen streamed live into VR.

Da1Expo Hall | *Ilmiversity* | *Unity/C#* | *Meta Quest 3* | *Azure TTS* | *AI Chat*

VR expo with six themed stalls, each hosting a robot guide that answers questions about the miniature on display. A stall button carries the visitor into that model's full-scale environment – stepping from a resort miniature into the resort itself to walk through it.

Earlier Projects | *UET Game Studio*

- **Car VR Simulation** (*XR Toolkit*, *RCC*) - VR racing with hand-tracked steering physics, AI opponents, and 3 game modes. [Demo](#)
- **Waste Land of Living Dead** (*UFPS*, *Photon PUN*) - multiplayer zombie shooter with lobbies, wave spawning, ragdolls, and cinematics.
- **VR Bio Lab** (*MRTK*) – educational VR simulator for inspecting and manipulating anatomical models. [Demo](#)
- **ARPlace** (*AR Foundation*, *Android*) – AR furniture placement using touch gestures and plane detection. [Demo](#)
- **Yanch e Shilock** (*PC*, *AI*, *VFX*) – combat and boss-fight systems with melee, magic abilities, and coordinated enemy AI.
- **Quiz the Globe** (*WebGL*, *Vercel*) – flag-identification game across six continents with Time Trial and Survival modes. [Play](#)
- **Letter Cascade** (*WebGL*, *Vercel*) – word puzzle with physics-based letter collisions and real-time validation. [Play](#)
